OCEAN CONFERENCE  
NICE, FRANCE 2025

SCIENCES-SUP-MER  
UN OCEAN DE SAVOIRS

# Ocean-based solutions: from blue carbon to ocean alkalinity enhancement

Join us at the marine station in beautiful Villefranche-sur-mer  
for an evening event which will delve into potential  
ocean-based approaches to fight climate change,  
alongside imperative efforts to cut emissions.

**DATE:** 9 June 2025

**TIME:** 18:30 - 21:30

**LOCATION:** Institut de la Mer de Villefranche, France

UNITED NATIONS  
OCEAN CONFERENCE  
NICE, FRANCE 2025

SCIENCES SUR-MER  
UN OCEAN DE SAVOIRS

Ocean warming, acidification, and oxygen loss are threatening marine ecosystems and the communities and societies who depend on them, but the ocean can also play a key role in mitigating and adapting to climate change. Experts from science, economy, conservation, policy and business will debate the effectiveness, co-benefits and potential risks of two such measures: the protection and restoration of blue carbon ecosystems (a nature-based approach) and ocean alkalinity enhancement (a technological approach).

On invitation only - RSVP by 5 June 2025
